

## Progress 1

Langkah awal instalasi **Next.js** untuk konfigurasi API, mengacu pada dokumentasi resmi.

```
❖ haidar@haidar:~/Documents/dataKey$ npx create-next-app@latest
✓ What is your project named? ... api
✓ Would you like to use the recommended Next.js defaults? > No, customize settings
✓ Would you like to use TypeScript? ... No / Yes
✓ Which linter would you like to use? > ESLint
✓ Would you like to use React Compiler? ... No / Yes
✓ Would you like to use Tailwind CSS? ... No / Yes
✓ Would you like your code inside a `src/` directory? ... No / Yes
✓ Would you like to use App Router? (recommended) ... No / Yes
✓ Would you like to use Turbopack? (recommended) ... No / Yes
? Would you like to customize the import alias (`@/*` by default)? > No / Yes
```

## Progress 2

Push project ke repositori GitHub.

**Note:** Abaikan “X” mungkin berkaitan dengan konfigurasi vercel postgres, bisa diabaikan saat ini.
