

1. Membuat `route.ts` untuk mengatur endpoint API selanjutnya

The screenshot shows the VS Code interface. On the left is the Explorer sidebar with a tree view of the project structure:

- DATAKEY**:
 - api**:
 - .next
 - node_modules
 - prisma**:
 - migrations
 - schema.prisma
 - public**
 - src**:
 - app**:
 - api**:
 - users**:
 - route.ts**
 - rumah
 - favicon.ico
 - # globals.css

```
ts route.ts 1, U X
api > src > app > api > users > ts route.ts > [o] GET
1 import { PrismaClient } from "@generated/prisma";
2 import { NextResponse } from "next/server";
3
4
5
6 // Create variable prisma client
7 //const prisma = new PrismaClient();
8
9 // arrow function
10 export const GET = async () => [
11   return new NextResponse(JSON.stringify({
12     message: "Test API",
13     success: true
14   }));
15 ]
```

2. `npm run dev !!!`
